JOB OBJECTIVE

Targeting a challenging Java Developer role to leverage expertise in Spring Boot, Hibernate, and security frameworks, driving the development of scalable, secure, and high-performance applications that align with organizational goals and enhance user experience through innovative back-end solutions.

CORE COMPETENCIES

- Spring Boot & Microservices Architecture
- AWS Cloud Services (EC2, AWS Lambda, Amazon S3, VPC, Elastic Load Balancing, IAM, CloudWatch)
- Design Patterns & Software Architecture
- System Design: Load Balancing, Caching (Redis), Database Replication
- JWT Authentication & Authorization
- Java Core & Advanced Programming
- Agile Methodologies & Sprint Delivery
- JUnit & Unit Testing
- Message Queuing with Kafka
- Debugging, Testing & Production Support

TECHNICAL SKILLS

- Languages:** Java, HTML/CSS, SQL
- Core Competencies:** Data Structures & Algorithms, Object-Oriented Programming, Design Patterns (Factory, Strategy, Singleton, Command), Maven, Microservices Architecture
- Frameworks & Technologies:** Spring Boot, Spring Security, Spring MVC, Hibernate
- Monitoring & Observability:** Prometheus, Grafana

EDUCATION

- Bachelor of Technology (B.Tech.) in Computer Science:** University of Petroleum and Energy Studies, Dehradun | 2020

PERSONAL DETAILS

- Languages Known:** English & Hindi

PROFILE SUMMARY

- Accomplishment-driven Java Developer with 5.2 years of experience delivering **secure, scalable, high-performance back-end systems** using **Spring Boot, Spring Security, Hibernate, and JUnit for unit testing**; adept at architecting **RESTful APIs** and **microservices** that support massive concurrency and complex data workflows.
- Expert in applying **OOP principles** and advanced **design patterns** (Factory, Strategy, Singleton, Command) alongside implementing **RBAC** and **JWT-based stateless authentication** to ensure robust security and compliance.
- Hands on experience with **AWS cloud services including Amazon EC2, AWS Lambda, Amazon S3, Elastic Load Balancing (ELB), Amazon VPC, CloudWatch, and IAM** along with practical experience in **Docker containerization** and implementing **CI/CD pipelines** to automate application build, testing, and deployment processes.
- Proven collaborator in **cross-functional teams**, boosting sprint velocity by 10%, with hands-on expertise in **debugging and maintaining production environments** to minimize downtime and operational risk.

WORK EXPERIENCE

CDAC - Center for Development of Advanced Computing

Project Engineer | Noida, Uttar Pradesh | May 2023 - Present

- Spearheading back-end development for the prestigious Central Vista project supporting over 1,000 users, ensuring robust role-based access control (RBAC) and stringent security compliance.
- Architected and implemented design patterns including Factory, Strategy, Singleton, and Command to promote modularity and reusability, reducing boilerplate code by approximately 40% and accelerating feature integration by 30%.
- Integrated Spring Security with JWT and dynamic RBAC using the Strategy Pattern, enabling secure and stateless session management across modules with zero reported access violations.

Mantra Softech | Junior Software Developer Level-1 | Ahmedabad, Gujarat | Nov 2022 - May 2023

- Developed core modules (product, cart, order) of a high-traffic e-commerce platform servicing 3,000+ daily users utilizing Java and Spring Boot.
- Implemented secure authentication and authorization mechanisms with Spring Security and JWT, achieving complete access control coverage.

BAAR Technology | Java Developer | Kolkata, West Bengal | May 2022 - Nov 2022

- Designed and enhanced identity lifecycle management workflows in an Identity Governance and Administration (IGA) platform using Spring Boot and Hibernate, boosting onboarding and offboarding efficiency by 30%.
- Improved code scalability and maintainability by 25% through refactoring using advanced OOP principles such as abstraction, polymorphism, and generics.
- Collaborated with cross-functional teams to deliver sprint goals effectively, resulting in a 10% increase in sprint velocity.

ITC Infotech | Software Engineer | Pune, Maharashtra | Apr 2021 - May 2022

- Completed intensive MES training and contributed to Apriso workflow implementations for Project ETEX, enhancing process traceability and digitization by 25%.
- Optimized SQL queries to accelerate manual data retrieval by 30%, supporting operational reporting for production and inventory management.
- Played a key role in debugging and validating production workflows, significantly reducing system downtime by identifying and resolving configuration issues.

MAJOR PROJECTS

Food Delivery Management System | Spring Boot, Microservices, Hibernate, Redis, Kafka | Nov 2024

- Architected a microservices platform (User, Restaurant, Order, Payment, Delivery) with REST APIs, API Gateway, and load balancing, enabling 40% faster deployments, 60% better scalability, and support for 500+ concurrent users.
- Enhanced performance using Redis caching (cut DB queries 40%), Kafka-based async order/event processing with event sourcing (99.9% delivery reliability), geo-based DB sharding (35% faster queries), and concurrency-safe order placement.
- Secured system with Spring Security & JWT (10K+ monthly logins, zero breaches), implemented Circuit Breaker & Retry patterns (95% fault tolerance), and set up Prometheus/Grafana monitoring with alerts (50% lower MTTR), plus multi-region disaster recovery.

Pharmacy Application | Spring Boot, Microservices, Hibernate, Redis, Kafka | Oct 2025

- Designed a microservices platform (User, Medicine Catalog, Order, Payment, Inventory) with REST APIs, API Gateway, and load balancing, enabling 40% faster deployments, 60% improved scalability, and handling 10K+ concurrent users.
- Optimized inventory and order management using Hibernate/JPA, Redis caching (reducing DB queries by 40%), geo-based sharding (30% faster queries), and Kafka-driven order lifecycle, achieving 99.9% order reliability and cutting cart abandonment by 30%.
- Secured and monitored the system with OTP-based Spring Security and JWT, Circuit Breaker (Resilience4j) for fault tolerance, and Prometheus/Grafana monitoring, reducing MTTR by 50% and ensuring high availability during peak demand.
